

PubLink's document formatting tools have been field-proven for many years and are indispensable to pros in North America, the UK and India. Their power is most in demand for STM material, complex directories, reference works, travel guides, legislative and legal volumes, and similar. Special strengths: XML styling, complex tables, fine control of finished-page appearance. This sheet introduces our solutions for different output channels and publishing needs – we may just have what you need!

PubLink Pro The full document-creation tool set for publishers or service providers. From XML or Word, through text composition and page make-up, to PDF for proof or print, or to e-pub. Go hands-off XML-to-PDF, or use our suite of text- and page-editing tools for full control of the finished document. There is no better full-feature, automated page builder to be found.

PubLink FOPage Price-competitive XSL-FO Processor. Takes FO content into high-quality PDF pages. Includes PubLink extensions to the FO standard, to allow the style sheet writer to access the full power of PubLink Pro, and a page-edit tool to correct problem pages *after* processing. FOPage is the next generation of FO processors.

PubLink E-pub *Scheduled release Q2, 2014.* Just the e-publishing output stream, where PDF is not needed. PubLink's approach to styling XML content for tablet display beats many others in the set of controls available in the stylesheet interface. Apply all styles appropriate for tablet display to your XML tags, using the menu-driven stylesheet, *and* get the added value of the PubLink engine for building tables and hyphenating justified text.

PubLink Proof Low-cost page-proof engine. Takes XML from your content system, delivers the formatted document in PDF. Provides all the page-formatting power of PubLink Pro, for hands-off proofing of your content.

PubLink Content/Proof Custom-designed editing interface to your CMS content, ideal for styling control of a reference book or data set for multiple-channel output. Interface based on OpenOffice. Add output channels to proof PDF, e-pub, web page, internal memo or other.
