

Tuesday February 21, 2006, Joppa, MD
For immediate release.

PubLink Inc., of Joppa MD, USA, who provide sales and service of the DeskTopPro electronic publishing software, is delighted to announce that Deanna Vezina has joined the PubLink management team, as Vice-President for New Product Development.

She will immediately head up PubLink's program to position its industry-standard composition/pagination software as an adaptable XML-driven add-on engine in a number of opening markets. Her long experience in XML, content-management systems and the DeskTopPro software prepares her well for this task. Having seen too many pages of mediocre quality emerging from the XML publishing tools found on content-management systems, she will focus on making PubLink's far superior page engine available to CM systems and other web-based applications. "They're looking for a way to put out great-looking pages, even if they don't yet know it!" says Vezina. She and PubLink want to educate them. She will also assist in ongoing development of PubLink's commercial DeskTopPro composition systems, as well as their installation and user training.

Company president Peter Butterfield says: "We couldn't have found a better fit. She brings her product vision and deep insider knowledge of the traditional and emerging publishing markets, along with top skills in user-interface design, software engineering, training and customer relations. Our staff is significantly enhanced!"

Dee is well known to many long-time users of the Penta composition system (now PubLink's), having been a key player in developing and supporting that product over many years. Since 1997 she has been president of Info-Tek Software of Orlando FL, providing XML solutions and support to clients in the publishing industry. She will now shift her energy and experience to PubLink as they push to open new markets.

Dee and her software-engineer husband Charles live in Orlando where they raise their four daughters and support the girls' premier soccer teams.
